

## Medical Microbiology Fellowship: Yale

The Yale Medical Microbiology fellowship program has an opening for the July, 2011 beginning date.

The fellowship is a one year program for physicians board-certified or eligible in Clinical Pathology or Infectious Diseases that combines clinical, research and teaching responsibilities. The fellow's primary responsibilities are at Yale-New Haven Hospital, with rotations through the VA Connecticut laboratories and the Connecticut Public Health Laboratory.

The ACGME-accredited Medical Microbiology Fellowship training program at Yale New Haven Medical Center is designed to provide a comprehensive experience in all aspects of diagnostic microbiology including consultative clinical practice, state-of-the-art diagnostic testing, multi-level teaching and an understanding of the principles of biomedical research. Instruction and practical experience occurs for all aspects of infectious disease diagnosis: bacteriology, mycology, mycobacteriology, parasitology, virology, serology, histopathology of infections, and molecular diagnostics.

The Yale-New Haven Medical Center provides a rich clinical, educational, and research environment for fellowship training in medical microbiology. The fellowship is centered at the Clinical Microbiology laboratory of Yale-New Haven Hospital. The laboratory provides state-of-the-art diagnostic microbiology services to the hospital's inpatient and outpatient care programs, which include active bone marrow, stem cell, and solid organ transplantation programs, HIV/AIDS care, cancer center, trauma center, and an active Tropical Medicine clinic.
